

Internship Daily Documentation

Day 6 — Saturday, May 2, 2026

Smart Internship & Hiring Portal | Intern: Mageswaran G

Field	Details
Date	Saturday, May 2, 2026
Intern	Mageswaran G
Project	Smart Internship & Hiring Portal
Mentor	Sandiya
Module	Week 1 — UI Design Upgrade (Bonus Day)
Day Goal	Upgrade Login and Signup pages to professional Minimal Editorial design
Final Status	Login + Signup pages fully redesigned and pushed to GitHub

1. SOD (Start of Day) — Morning Plan

Day 6 was a bonus day after completing Module 1. The goal was to upgrade the basic login and signup pages to a professional, modern design that matches real-world SaaS products.

Planned Tasks:

- Review 3 login page design variations
- Choose best design and implement for LoginPage.jsx
- Build matching SignupPage.jsx with same design language
- Add advanced features — confirm password, progress steps, password strength
- Refine based on feedback — remove role selector from login, fix bugs
- Push all changes to GitHub

2. Design Selection

Three professional login page designs were reviewed before starting development:

Design	Style	Description	Selected
Design 1	Corporate Split	Dark navy left panel with stats + white form right. Professional and trust-building.	No
Design 2	Glass Morph	Dark background with glowing orbs and glassmorphism card. Modern and bold.	No
Design 3	Minimal Editorial	White canvas, oversized bold text, accent color stripe. Used by top SaaS products.	YES

Design 3 (Minimal Editorial) was chosen because it matches HirePortal's orange+navy brand colors and uses the same design language as top SaaS companies like Linear and Vercel.

3. Login Page — What Was Built

3.1 Design Features

Feature	Description
Split Layout	Left editorial panel + right form panel side by side
Accent Stripe	Orange animated stripe slides down the left panel edge on load
Animated Logo	HirePortal logo pulses gently using CSS logoPulse animation
Bold Typography	Sora font — oversized 'Land your next role. Faster.' headline
Fixed Accent Color	Orange #E65C00 (brand color) — no role selector needed
Email Field	Focus glow matches brand color with smooth transition
Password Field	Show/hide toggle with eye icon
Forgot Password	Switches to reset view inside same card (no page change)
Loading State	Animated 3-dot loading indicator while API call runs
Error Box	Red styled box shows backend error message
Responsive	Left panel hides on mobile — form shows full width

3.2 Why Role Selector Was Removed

Initially the login page had 3 role buttons (Candidate, Company, Admin) on the left panel. After review, this was correctly identified as unnecessary because:

- During signup, user already picks their role — it is saved in MongoDB
- During login, backend finds user by email and already knows the role
- The role buttons on login page were only changing accent color — they did nothing useful
- Admin option on a public login page is a security concern

Decision: Role selector removed from login. Accent color fixed to orange (#E65C00).

3.3 JSX Syntax Bug Fixed

A syntax error was found in the LoginPage.jsx file during review:

Line	Wrong Code	Correct Code	Explanation
return statement	return {	return (	React components need round brackets, not curly braces
Div structure	Closing tags mismatched	Proper nesting fixed	hp-left and hp-right divs were not closed correctly

4. Signup Page — What Was Built

4.1 Design Features — Matching Login

Feature	Description
Same split layout	Same Minimal Editorial design as login for consistency
Role cards (2 only)	Candidate and Company — no Admin (Admin created directly in DB)
Role color switching	Left panel accent color changes when role card is clicked
Progress steps	3-step indicator at top: Your details → Profile setup → Get started
Step animation	Steps animate forward as user progresses through form
Full Name field	Generic placeholder 'Enter your full name' — not a personal name
Email field	Focus glow with accent color
Password field	Show/hide toggle + password strength bar (Weak/Fair/Good/Strong)
Confirm Password	Re-type password field with live match/mismatch indicator
Terms checkbox	I agree to Terms of Service and Privacy Policy
Smart button	Button text changes: 'Create Candidate Account' or 'Create Company Account'
Button disabled	Submit button stays disabled while passwords do not match
Green success	Green success box with 2 second hold before redirect
Loading dots	Same animated loading dots as login page
Responsive	Left panel hides on mobile

4.2 3 Changes Made Based on Feedback

Change	Before	After	Reason
1. Confirm password	No confirmation field	Re-type password with green/red match indicator	User may mistype password without knowing
2. Progress steps timing	Step 2 → Step 3 too fast (instant)	2 second hold on Step 2 before Step 3	User should see Step 2 'Profile setup' clearly
3. Benefit text in role cards	Browse 12K+ Opportunities / Access 50K+ candidates	Browse Opportunities / Access Candidates	Numbers look fake without real data — keep it simple

4.3 Progress Steps — How It Works

The 3-step progress indicator at the top of sign-up animates based on user action:

Step	When Active	Visual State	Form Title
------	-------------	--------------	------------

Step 1 — Your details	When form is open and empty or being filled	Orange dot + bold text	Create your account
Step 2 — Profile setup	Immediately when Create Account is clicked	Step 1 becomes tick ✓, Step 2 turns orange	Creating your account...
Step 3 — Get started	After 2 second wait + API success	Steps 1+2 become ticks, Step 3 turns orange	You're all set!
Error case	If API returns error	Returns to Step 1 automatically	Shows error message

4.4 Password Strength Bar

Shows below the password field while user is typing. 4 colored segments fill up as password gets stronger:

Score	Label	Color	Conditions
1/4	Weak	Red (#ef4444)	Only 8+ characters
2/4	Fair	Orange (#f97316)	8+ chars + uppercase letter
3/4	Good	Yellow (#eab308)	8+ chars + uppercase + number
4/4	Strong	Green (#22c55e)	8+ chars + uppercase + number + special character

5. Technical Details

Fonts Used

- Sora — Bold display font for headings and logo (8 weight). Used for 'Land your next role.' and 'Sign in' headings.
- Inter — Clean body font for labels, inputs, and body text (3-6 weight).
- Both loaded from Google Fonts API inside the style tag.

Colors Used

Color	Hex Code	Where Used
HirePortal Orange	#E65C00	Accent stripe, logo, buttons, links, focus glow
HirePortal Navy	#1D3557	Company role color, headings
Dark Text	#0a0a14	All heading text
Gray Background	#f0f0f0	Page background
White	#####	Card left panel
Light Gray	#fafafa	Card right panel
Border Gray	#e5e5e5	Input borders (unfocused)

CSS Animations

Animation	Used In	Effect
fadeUp	Card on load, form views	Slides up + fades in from bottom
stripeSlide	Left panel stripe	Grows downward from top on load
logoPulse	Logo mark	Gentle scale pulse every 3 seconds
dotBlink	Loading button	3 dots blink in sequence

Promise.all for 2 Second Hold

To make Step 2 visible for 2 seconds before moving to Step 3, Promise.all was used:

- Promise.all runs two things at the same time
- Thing 1: the signup API call (may be fast or slow)
- Thing 2: a 2 second timer
- Both must finish before moving to Step 3
- If API is fast (0.5 sec) — timer finishes at 2 sec — Step 2 stays visible for 1.5 more seconds
- If API is slow (3 sec) — API finishes at 3 sec — Step 2 stays until API done

6. Files Changed Today

File	What Changed
frontend/src/pages/LoginPage.jsx	Complete redesign — Minimal Editorial design, no role selector, fixed JSX bug
frontend/src/pages/SignupPage.jsx	Complete redesign — matching design, confirm password, progress steps, strength bar

7. GitHub Commits Today

Commit Message	Files Changed	What Was Done
Design: New Minimal Editorial login page - V3 design	LoginPage.jsx	First version of new login page
Design: New Minimal Editorial signup page - matching login design	SignupPage.jsx	First version of new signup page
Design: New login and signup pages - Minimal Editorial style	Both files	Final version with all changes applied

8. What Was NOT Done Today (Planned for Later)

- Forgot Password / Reset Password — needs backend email setup with nodemailer
- Gmail App Password setup needed for email sending
- Reset token API endpoints (2 new backend routes)
- Reset password frontend page

These will be built at the start of Week 2 before starting Module 2.

9. EOD Summary

Task	Status
Review 3 login designs and choose best	Done
Build new Login page — Minimal Editorial design	Done
Build new Signup page — matching design	Done
Add confirm password with match indicator	Done
Add animated progress steps 1 → 2 → 3	Done
Add password strength bar	Done
Remove role selector from login (smart decision)	Done
Fix JSX syntax bug in LoginPage	Done
Update placeholder text to generic	Done
Remove numbers from role card benefit text	Done
Push all changes to GitHub	Done

10. Key Concepts Learned Today

Concept	Simple Explanation
Design Thinking	Before coding, choose a design direction. Commit to it fully. Better than changing halfway.
Minimal Editorial Style	White canvas + oversized bold typography + accent stripe. Used by top SaaS companies.
React JSX Syntax	return () uses round brackets. return { } is for returning an object — completely different!
Promise.all	Runs two async operations at same time. Waits for both to finish before continuing.
Password Strength	Check 4 conditions: length, uppercase, number, special character. Each adds 1 score.
Live Match Check	Compare two state values on every keystroke. Show green or red instantly.
UX Thinking	Questioned why role selector existed on login. It was useless — removed it. Engineers should always ask 'why does this exist?'
Browser Inspect	Shows a live copy of your page in memory. Deleting there is safe — refresh restores everything.

11. Tomorrow — Next Steps

- Week 2 starts Monday — Module 2: User Profile Management
- Before Module 2: Build Forgot Password feature (nodemailer email setup)

- Module 2 features: Candidate profile, Company profile, Resume upload, Profile edit

End of Day 6 Documentation | Smart Hiring Portal Internship | Mageswaran G
