

HirePortal

Smart Internship & Hiring Portal

DAILY INTERNSHIP DOCUMENTATION — DAY 9

Field	Details
Date	Wednesday, May 6, 2026
Intern	Mageswaran G
Project	Smart Internship & Hiring Portal
Mentor	Sandhiya
Module	Module 2 — User Profile Management (Day 3 of 4)
Day Focus	Frontend Profile Page + Photo Upload + Tailwind Migration + Production Improvements
Final Status	Module 2 Frontend 100% Complete. Production-grade improvements applied.
GitHub	https://github.com/Mageswaran-G/smart-hiring-portal

1. SOD (Start of Day) — Morning Plan

SOD mail sent to Sandhiya. The day focused on completing Module 2 frontend — building the profile page, integrating all backend APIs, and making the project production-ready.

Planned Tasks

- Build ProfilePage UI for candidate and company users
- Integrate GET /api/v1/users/profile to fetch and display profile data
- Build edit profile form and connect PUT /api/v1/users/profile
- Implement resume upload UI using POST /api/v1/users/upload-resume
- Add Profile navigation from dashboard using React Router
- Test complete flow: login → profile → update → upload → refresh
- Push to GitHub and send EOD update

2. What Was Built Today

2.1 ProfilePage.jsx — Main Profile Page

Built complete profile page connected to all backend APIs with view mode, edit mode, photo upload, resume upload, and role-based rendering.

Feature	Description
View mode	Shows all profile fields — bio, location, phone, skills, education, experience
Edit mode	Form with all editable fields including name, save and cancel buttons

Resume section	Shows filename, size, date, View button and Upload/Replace button
Role-based rendering	Candidate sees skills/education. Company sees companyName/website/industry
Photo upload	Click avatar circle to open file picker and upload photo
Visibility toggle	Public or Private toggle below avatar after photo upload
Logo click	Clicking HP logo or HirePortal text goes to correct dashboard by role
Responsive	Two columns on desktop, single column on mobile

2.2 Component Architecture — Split into 4 Files

ProfilePage.jsx was refactored into 4 separate components. Each component has one responsibility. This is proper React architecture.

Component	Purpose
ProfileHeader.jsx	Avatar/photo, name, email, role badge, Edit button, visibility toggle
ProfileDetails.jsx	All profile fields in view mode — read only
ResumeSection.jsx	Resume info, View button, Upload/Replace button
EditProfileForm.jsx	All editable fields with Save/Cancel buttons

2.3 Profile Photo Upload — Backend

- Updated uploadMiddleware.js to accept images — JPG, JPEG, PNG, WEBP
- Added image file signature validation — JPEG FFD8FF, PNG 89504E47, WEBP 52494646
- Created uploads/profiles/ folder with .gitkeep
- Added uploadProfilePhoto function to userService.js with safe old-file-delete flow
- Added uploadProfilePhoto to userController.js with signature verification
- Added POST /upload-photo route with verifyToken middleware in userRoutes.js
- Fixed CORS for images — added Cross-Origin-Resource-Policy: cross-origin to server.js
- Fixed JPEG support — added image/jpg alongside image/jpeg to allowed MIME types

2.4 Photo Visibility Toggle

- Added photoVisibility field to User model — enum public/private, default public
- Added photoVisibility to allowedFields in userService.js
- Added photoVisibility to Zod updateProfileSchema in validators.js
- Built Public/Private toggle buttons in ProfileHeader.jsx with role-based selected color

2.5 Name Editing

- Added name to backend allowedFields in userService.js
- Added name validation to Zod updateProfileSchema in validators.js (min 3 chars)
- Added Full Name field to EditProfileForm.jsx
- Added name to frontend allowedFields in ProfilePage.jsx handleSave function

2.6 Company Profile Page

- Added My Profile button to CompanyDashboard in App.jsx
- Added useNavigate hook to both CandidateDashboard and CompanyDashboard

- Same ProfilePage.jsx handles both roles — shows correct fields automatically

2.7 Microsoft Teams Setup

- Received email from Rynixsoft — asked to install Teams and submit work there
- Installed Microsoft Teams and joined Rynixsoft organization
- Found Sandhiya using New Message and email address
- Sent introduction message with GitHub link and module progress
- Sandhiya replied: Hello Mageswaran, good job. We will have a meet later to discuss about the project.
- Sent module progress summary and GitHub link to Sandhiya on Teams

3. Production-Grade Improvements Applied

Based on ChatGPT code review feedback, multiple improvements were applied to bring the project from internship-level to junior-to-mid production quality.

3.1 Environment Variables — Frontend

- Created frontend/.env with VITE_API_URL=http://localhost:8000
- Removed all hardcoded http://localhost:8000 from frontend components
- Replaced with import.meta.env.VITE_API_URL in authService.js, ProfileHeader.jsx, ResumeSection.jsx

3.2 asyncHandler Wrapper — Backend

- Created backend/utils/asyncHandler.js
- Wraps async controller functions — auto-catches errors and passes to Express error handler
- Eliminates repetitive try/catch blocks from every controller

3.3 Centralized Theme — theme.js

- Created frontend/src/utils/theme.js with candidateTheme and companyTheme objects
- getTheme(isCandidate) returns correct color theme based on role
- Eliminates repeated isCandidate ? orange : navy ternary expressions throughout code

3.4 Other Fixes

- Removed window.innerWidth — not reactive, Tailwind responsive classes used instead
- Removed dead code and debug console.log lines

4. Tailwind CSS Migration — Complete

All profile components migrated from inline style objects (const s = {}) to Tailwind CSS classes. This was the biggest frontend architecture improvement of the day.

File	Migration Status
ProfileHeader.jsx	100% Tailwind — no inline styles remaining

ProfileDetails.jsx	100% Tailwind — no inline styles remaining
ResumeSection.jsx	100% Tailwind — no inline styles remaining
EditProfileForm.jsx	100% Tailwind — no inline styles remaining
ProfilePage.jsx	100% Tailwind — no inline styles remaining
App.jsx	Partial — dashboard headings updated to font-sora

4.1 Sora Font via Tailwind @theme

- Added Google Fonts @import to index.css — MUST be first line before @import tailwindcss
- Registered Sora and Inter fonts using Tailwind v4 @theme directive
- Created font-sora and font-inter custom utility classes
- Removed ALL style={{ fontFamily: Sora, sans-serif }} inline styles from all files
- Verified with: `grep -r "fontFamily.*Sora" frontend/src/` — empty result confirmed

4.2 Role-Based Colors

Element	Candidate	Company
HP Logo Box	bg-orange-500	bg-blue-900
Back Button	border-orange-400 text-orange-500	border-blue-900 text-blue-900
Logout Button	bg-orange-500	bg-blue-900
Avatar Border	border-orange-500	border-blue-900
Avatar Background	bg-orange-500	bg-blue-900
Edit Profile Button	bg-orange-500	bg-blue-900
Save Button	bg-orange-500	bg-blue-900
Role Badge	bg-orange-50 text-orange-500	bg-blue-50 text-blue-900
Input Focus Ring	focus:border-orange-400	focus:border-blue-800
View/Upload Resume	bg-orange-500	bg-blue-900

5. Bugs Fixed Today

Bug	Root Cause	Fix Applied
<a tag missing in resume	Cut off when pasting code — opening <a was missing	Added <a tag before href attribute manually
useNavigate not defined	Not imported in App.jsx import statement	Added useNavigate to react-router-dom import
Photo not loading — CORS blocked	express.static missing cross-origin header	Added Cross-Origin-Resource-Policy: cross-origin
JPEG not supported	Only image/jpeg checked — some systems send image/jpg	Added image/jpg to allowedTypes and signature check

Name save failing	name missing from Zod updateProfileSchema	Added name field to Zod schema in validators.js
Company badge text missing	profile.role.toUpperCase() missing inside span	Added role text between span tags
Comment text rendering	Comments inside JSX template literals rendered as text	Removed inline comments from template literals
window.innerWidth not reactive	Static value — does not update on resize	Removed — Tailwind lg: classes used instead
CSS @import order error	@import url() must be before @import tailwindcss	Moved Google Fonts import to first line

6. Test Results

Test	Result
Dashboard My Profile button → profile page opens	PASS
Profile photo loads without CORS error	PASS
Edit Full Name → saves and shows in header	PASS
Edit bio, location, phone, skills → saves correctly	PASS
Upload resume → shows filename, size, date	PASS
View resume → PDF opens in new tab	PASS
Upload JPEG photo → shows in circular avatar	PASS
Click Public button → orange, saved to DB	PASS
Click Private button → orange (candidate) / navy (company), saved to DB	PASS
Company login → Company Name, Website, Industry fields show	PASS
Candidate — everything orange throughout	PASS
Company — everything navy throughout	PASS
Mobile view at 400px — cards stack vertically	PASS
Click HP logo → goes to correct dashboard	PASS

7. ChatGPT Code Review — Scores

Area	Before Today	After Today
Backend Architecture	8/10	8.5/10
Frontend Architecture	6.5/10	8.5/10
Frontend UI	7.5/10	8.5/10
Security	8/10	8.5/10

Overall Internship Level	Top 10-15%	Top 5%
--------------------------	------------	--------

Most Impressive Parts (per ChatGPT)

- validateFileSignature() — real-world file signature verification for all upload types
- Path traversal protection — resolvedPath.startsWith(allowedDir) check
- Refresh token rotation with concurrent request queue (isRefreshing + refreshQueue)
- Component architecture — ProfilePage as orchestrator, child components as presentational
- Upload flow sequence — upload new → update DB → delete old (no data loss)

8. Key Concepts Learned Today

Concept	Explanation
Tailwind CSS	Write styles as class names directly on elements — no separate style objects needed
Tailwind v4 @theme	Register custom values like font families using @theme block in CSS file
Component decomposition	Split large files into small focused components — each does one thing only
Role-based theming	Centralized theme object — cleaner than repeated ternary expressions
asyncHandler pattern	Wrap async functions to auto-catch errors — removes try/catch boilerplate
CSS import order	@import url() MUST come before @import tailwindcss — CSS parses top to bottom
CORS for static files	Cross-Origin-Resource-Policy: cross-origin header needed for images across ports
MIME type compatibility	Accept both image/jpg and image/jpeg — different systems send different values
VITE env variables	Use VITE_ prefix in .env — access with import.meta.env.VITE_API_URL in code
grep command	grep -r "pattern" folder/ finds text in all files — useful to verify cleanup

9. Files Changed Today

File	Action	What Changed
frontend/src/pages/ProfilePage.jsx	Modified	Complete profile page — view, edit, photo upload, Tailwind
frontend/src/components/profile/ProfileHeader.jsx	Created	Avatar, photo, name, email, badge, visibility — Tailwind
frontend/src/components/profile/ProfileDetails.jsx	Created	View mode profile fields — Tailwind
frontend/src/components/profile/ResumeSection.jsx	Created	Resume display and upload UI — Tailwind
frontend/src/components/profile/EditProfileForm.jsx	Created	Edit mode form with all fields — Tailwind
frontend/src/App.jsx	Modified	My Profile button, useNavigate, font-sora, nav text updates

frontend/src/services/authService.js	Modified	Replaced hardcoded URL with VITE_API_URL
frontend/src/index.css	Modified	Google Fonts import and @theme for Sora and Inter fonts
frontend/src/utls/theme.js	Created	Centralized candidateTheme and companyTheme tokens
frontend/.env	Created	VITE_API_URL=http://localhost:8000
backend/middleware/uploadMiddleware.js	Modified	Image support — JPG, PNG, WEBP with signature validation
backend/models/User.js	Modified	Added photoVisibility field
backend/services/v1/userService.js	Modified	uploadProfilePhoto, name and photoVisibility to allowedFields
backend/controllers/v1/userController.js	Modified	uploadProfilePhoto controller, asyncHandler applied
backend/routes/v1/userRoutes.js	Modified	POST /upload-photo route added
backend/server.js	Modified	Cross-Origin-Resource-Policy header for static files
backend/utls/asyncHandler.js	Created	Auto-catches errors from async controllers
backend/utls/validators.js	Modified	Added name and photoVisibility to updateProfileSchema

10. GitHub Commits Today

Commit Message	Files	What Was Done
Module 2: Profile page refactored into components - candidate and company	6 files	Component split, company profile, logo click
Module 2: Tailwind CSS migration, photo upload, visibility toggle, role-based colors, env variables	15 files	Photo upload, Tailwind, env vars, asyncHandler
Frontend: Remove all inline font styles, add Sora via Tailwind @theme, centralized theme utls	8 files	Font migration, theme.js, all Sora inline styles removed

11. EOD (End of Day) Summary

Task	Status
ProfilePage.jsx — complete with view and edit modes	Done
Component architecture — 4 separate components created	Done
Profile photo upload — backend and frontend complete	Done
JPEG support fix — both image/jpg and image/jpeg accepted	Done
Photo visibility toggle — Public/Private with DB storage	Done

Name field — editable from profile page	Done
HirePortal logo click — navigates to correct dashboard	Done
Company profile page — My Profile button added	Done
Microsoft Teams — joined Rynixsoft org, contacted Sandhiya	Done
Environment variables — no hardcoded URLs in frontend	Done
asyncHandler wrapper — try/catch boilerplate removed	Done
Tailwind CSS migration — all profile components complete	Done
Sora font via Tailwind @theme — no inline font styles remaining	Done
Role-based colors — every element changes color by role	Done
Centralized theme.js — candidateTheme and companyTheme	Done
Responsive design — works on mobile and desktop	Done
GitHub pushed — 3 commits with clean messages	Done
EOD mail sent to Sandhiya	Done
EOD message sent on Teams	Done

12. Important Notes for Future Reference

- Tailwind v4 uses @theme in CSS to register custom values — no tailwind.config.js needed
- Google Fonts @import MUST come before @import tailwindcss in index.css
- grep -r "pattern" folder/ is the fastest way to verify cleanup across all files
- image/jpg and image/jpeg are both valid — always accept both in MIME type check
- Cross-Origin-Resource-Policy: cross-origin header needed for images served across ports
- asyncHandler eliminates try/catch from every controller — one wrapper handles all
- VITE_ prefix required for env variables in Vite — access with import.meta.env.VITE_NAME
- JSX template literals cannot have // comments — they render as visible text on screen
- Component decomposition: one file = one responsibility — never dump everything in one file
- Centralized theme object is cleaner than repeating isCandidate ? orange : navy everywhere
- window.innerWidth is not reactive in React — use Tailwind responsive classes (lg: prefix)

13. Tomorrow — Day 10 Plan

#	Task	Priority
1	Profile completion percentage circle around avatar	High
2	Additional profile sections — education, employment, career preferences	High
3	Apply theme.js to all components — remove remaining ternary expressions	Medium
4	Module 2 final documentation	High

5	Prepare for Module 3 — Job Posting (starts Monday)	Medium
