

INTERNSHIP DAILY DOCUMENTATION

Day 11 — Friday, May 8, 2026

Smart Internship & Hiring Portal | Intern: Mageswaran G

Field	Details
Date	Friday, May 8, 2026
Intern	Mageswaran G
Project	Smart Internship & Hiring Portal
Mentor	Sandhiya
Module	Module 2 — User Profile Management (Final Day)
Day Focus	Profile features completion + Company profile sections + All bug fixes
Final Status	Module 2 — 100% Complete
GitHub	https://github.com/Mageswaran-G/smart-hiring-portal

1. SOD (Start of Day) — Morning Plan

SOD mail sent to Sandhiya. Day 11 was focused on completing all remaining Module 2 features and building company profile sections.

Subject: SOD Update — Day 11 | Friday | Module 2 Finalization

Planned Tasks:

- Complete profile completion percentage circle around avatar
- Finish all pending profile sections — certifications, languages, portfolio
- Build public profile URL system
- Implement multiple resumes feature
- Add rich text bio editor
- Add privacy controls section
- Build company profile sections — cover banner, hiring status, culture, benefits, tech stack
- Fix all pending bugs from code review

2. What Was Built Today

2.1 Profile Completion Circle — Fixes Applied

Profile completion circle was built yesterday evening (after Day 10 document). Today three bugs were fixed.

Bug	Root Cause	Fix Applied
Change photo button showing as square	Missing relative position on inner div	Added relative class to inner div in ProfileAvatar
Company circle showing orange color	Hardcoded orange color instead of theme color	Used theme.primary driven by role — navy for company
Completion % text showing below circle	Extra text line not needed	Removed progress bar text — kept only circle percentage

2.2 Config-Driven Completion Logic

Profile completion was refactored to config-driven approach — professional standard used in real companies.

Before: if/else chain for each field type. Problem: messy as new fields added.

After: each field has a type property in config array — text, array, boolean, object.

Field Type	Example	How Checked
text	name, bio, phone	value.trim().length > 0
array	skills, educationList	value.length > 0
boolean	openToWork	value === true
object	resume	value.url exists

2.3 Theme.js Upgraded to Role String

getTheme(true/false) was changed to getTheme(role). This properly supports candidate, company, and admin without boolean confusion.

Before	After	Benefit
getTheme(isCandidate) — boolean	getTheme(user.role) — role string	Admin can have its own purple theme properly

2.4 Custom Headline Section

Like LinkedIn — a short professional line shown below the name on profile.

- File created: sections/HeadlineSection.jsx
- Max 120 characters
- Inline edit — click to type, check to save, X to cancel
- Shown in ProfileHeader below name

2.5 Open to Work Toggle

A toggle switch on the profile. When ON — green Open to Work badge shows on profile. Recruiters see this and know candidate is available.

- File created: sections/OpenToWorkSection.jsx
- Saves to MongoDB as openToWork: true/false
- Badge shown in ProfileHeader badge row

2.6 Resume Visibility Toggle

Candidate can control who sees their resume — Public or Private.

- File created: sections/ResumeVisibilitySection.jsx
- Public — anyone with profile URL can view and download
- Private — only candidate can see it
- Respects visibility in public profile route

2.7 Skills Section Tag UI Upgrade

Skills upgraded from plain text to proper tag system. Each skill is a removable tag with proficiency level.

- File: sections/SkillsSection.jsx — complete rewrite
- 4 proficiency levels: beginner, intermediate, advanced, expert
- Each level shows a colored badge — gray/blue/orange/green
- Add skill with level dropdown, remove with X button
- Save button shows only when unsaved changes exist
- savedSkills state tracks last saved — prevents false hasChanges after refresh

2.8 Certifications Section

Candidates add their certificates — AWS, Google, HackerRank etc.

- File created: sections/CertificationsSection.jsx
- Fields: name, issuer, year, URL
- Each cert shows as a card with external link button
- Add, edit, delete individual entries
- Bug fixed: curly braces corrupted in paste — fixed using terminal node script

2.9 Languages Section

Add languages with proficiency level — like LinkedIn.

- File created: sections/LanguagesSection.jsx
- Proficiency levels: Basic, Conversational, Fluent, Native
- Add, remove languages
- Colored badge per proficiency level

2.10 Portfolio Projects Section

Candidates add portfolio projects with links and tech stack.

- File created: sections/PortfolioSection.jsx
- Fields: title, description, URL, technologies used
- Tech shown as tags
- External link button opens project URL in new tab

2.11 Auto Save Drafts — useAutoSave Hook

When user is editing and accidentally closes tab — data is saved automatically.

- File created: hooks/useAutoSave.js
- Saves to localStorage every 1 second while editing
- Key is based on section name — no conflicts
- Restored when user opens edit mode next time
- Draft cleared after successful save or cancel
- Used in: AboutSection, PersonalDetailsSection, CareerPreferencesSection, SocialLinksSection

2.12 Public Profile URL System

Every candidate and company gets a unique public link anyone can view without login — like LinkedIn.

File	Purpose
backend/routes/v1/publicRoutes.js	GET /api/v1/public/:slug — no auth required. Respects all visibility settings
frontend/sections/ProfileSlugSection.jsx	Set custom URL slug, check availability in real time
frontend/pages/PublicProfilePage.jsx	Public facing profile page — clean design, no login needed

Feature	Details
Slug format	Lowercase letters, numbers, hyphens only. Min 3, max 40 chars
Availability check	GET /api/v1/public/check-slug/:slug — returns available: true/false
profileVisibility: private	Returns 403 — profile not available
photoVisibility: private	Photo hidden from public page
contactVisibility: private	Phone, city, state, country hidden from public page
resumeVisibility: private	Resume section hidden from public page

2.13 Multiple Resumes Section

Candidates can upload multiple resumes — one for each job type.

- File created: sections/MultipleResumesSection.jsx
- Each resume has a label — Frontend Resume, Full Stack Resume etc.
- Upload, view (opens in new tab), delete individual resumes
- Stored as array in MongoDB: resumes [{url, originalName, size, mimeType, uploadedAt, label}]
- Backend userService.js allowedFields updated with resumes field

2.14 Rich Text Bio Section

Bio upgraded from plain textarea to formatted editor — no external library needed.

- File created: sections/RichTextAboutSection.jsx
- Format buttons: Bold, Italic, Underline, Bullet List, Undo
- Uses browser built-in document.execCommand — works perfectly with React 19
- react-quill was tried first but incompatible with React 19 — switched to custom solution
- HTML content stored in MongoDB as bio field
- Renders formatted HTML in view mode

2.15 Privacy Controls Section

Master privacy toggle plus section-level visibility controls.

- File created: sections/PrivacyControlsSection.jsx
- Public Profile toggle — hides entire profile from public search
- Photo visibility — public or private
- Resume visibility — public or private
- Public Profile URL — visible or hidden
- All saved to MongoDB and respected in public profile route

2.16 Company Profile Extended Sections

Five new sections built specifically for company profiles. Zero candidate code touched.

Section	File	What It Does
Cover Banner	sections/CoverBannerSection.jsx	Upload, change, remove company cover banner. Navy gradient shown when no banner. Hover reveals buttons.
Hiring Status	sections/HiringStatusSection.jsx	Toggle currently hiring / not hiring. Green when ON, gray when OFF. Saves immediately.
Company Culture	sections/CompanyCultureSection.jsx	Describe work environment and values. 3000 char limit with counter. Edit/Save/Cancel pattern.

Section	File	What It Does
Employee Benefits	sections/EmployeeBenefitsSection.jsx	Tag UI for benefits. Quick suggestions — Health Insurance, Remote Work etc. Max 20 benefits.
Tech Stack	sections/CompanyTechStackSection.jsx	Tag UI for technologies. Popular suggestions — React, Node.js, Python etc. Max 30 items.

Backend changes for company sections:

File	What Changed
backend/models/User.js	Added: coverBanner, hiringStatus, companyCulture, employeeBenefits, companyTechStack fields
backend/utils/validators.js	Added: all 5 new fields to updateProfileSchema with correct Zod types
backend/services/v1/userService.js	Added: all 5 fields to allowedFields + uploadCoverBanner function
backend/controllers/v1/userController.js	Added: uploadCoverBanner controller
backend/routes/v1/userRoutes.js	Added: POST /upload-banner route with company-only RBAC

3. Bugs Fixed Today

Bug	Root Cause	Fix Applied
Skills showing [object Object] in ProfileDetails	ProfileDetails used skills.join() but skills are now objects {name,level}	Changed to skills.map(s => s.name).join() — extracts name correctly
SkillsSection save button showing after refresh	hasChanges compared against profile.skills — format difference caused mismatch	Added savedSkills state — tracks what was last saved. hasChanges compares against savedSkills not profile
Cover banner could not be removed	PUT /users/profile with {coverBanner:""} rejected by Zod	Confirmed coverBanner: z.string().optional() in validators — fixed allowedFields in userService
Hiring status / culture / benefits / tech stack not saving	New company fields missing from allowedFields in userService.js	Added all 5 new company fields to allowedFields array
India showing in Contact Info and Personal Details	country: {default: "India"} in User model + data already in MongoDB	Removed India default from User model. Cleared existing India values from MongoDB using updateOne
Github icon not found in lucide-react	lucide-react removed social brand icons	Replaced Github and LinkedIn imports with Link2 and ExternalLink icons

Bug	Root Cause	Fix Applied
RichTextRichTextAboutSection — doubled name	sed command replaced AboutSection inside RichTextAboutSection too	Fixed with second sed command to correct the doubled name
fetchProfile not defined in ProfilePage	fetchProfile not included in useProfile.js return statement	Added fetchProfile to the return object of useProfile hook
AboutSection undefined after import change	JSX still used AboutSection after import changed to RichTextAboutSection	Found and replaced all remaining AboutSection references in ProfilePage JSX
PublicProfilePage white screen / ErrorBoundary caught error	Multiple missing imports and icon name errors	Fixed all imports — Github -> Link2, correct icon names confirmed from lucide-react type definitions

4. Key Concepts Learned Today

Concept	Simple Explanation	Used Where
Config-driven logic	Store field definitions in array with type property. Code reads type and handles automatically. No if/else for each field.	profileCompletion.js
role string vs boolean	getTheme("candidate") is cleaner than getTheme(true). Strings make code readable. Boolean breaks with 3 roles.	theme.js, all components
execDocument.execCommand	Browser built-in function for text formatting — bold, italic, lists. No library needed. Works in contentEditable div.	RichTextAboutSection
savedSkills state pattern	Track what was last saved separately from profile prop. Reliable hasChanges detection even if server returns different format.	SkillsSection
Slug uniqueness check	Before saving slug, check server if it is taken. Real-time feedback to user. Prevents duplicate URLs.	ProfileSlugSection
\$unset in MongoDB	Removes a field from document entirely — different from setting to empty string. Field will not exist at all.	mongosh cleanup commands
lucide-react icon names	Social brand icons removed from lucide-react. Must use	PublicProfilePage

Concept	Simple Explanation	Used Where
	generic icons like Link2 and ExternalLink instead.	
ErrorBoundary	React component that catches JS errors. Shows friendly error page instead of blank white screen.	ProfilePage
allowedFields whitelist	Only listed fields pass through to MongoDB. Security — prevents role or password injection via PUT /profile.	userService.js
RBAC on upload routes	authorizeRole middleware on upload-banner restricts to company only. authorizeRole on upload-resume restricts to candidate only.	userRoutes.js

5. Files Changed Today

Backend Files

File	Action	What Changed
backend/models/User.js	Modified	Removed India defaults. Added: coverBanner, hiringStatus, companyCulture, employeeBenefits, companyTechStack
backend/utls/validators.js	Modified	Added all 5 company extended fields to updateProfileSchema
backend/services/v1/userService.js	Modified	Added 5 company fields to allowedFields. Added uploadCoverBanner function
backend/controllers/v1/userController.js	Modified	Added uploadCoverBanner controller
backend/routes/v1/userRoutes.js	Modified	Added POST /upload-banner with uploadLimiter + verifyToken + authorizeRole(company)
backend/routes/v1/publicRoutes.js	Modified	Added photoVisibility and contactVisibility and resumeVisibility checks

Frontend Files — New Components

File	Created/Modified	Purpose
src/utls/profileCompletion.js	Created	Config-driven completion logic with field types

File	Created/Modified	Purpose
src/utils/theme.js	Modified	getTheme(role) — role string instead of boolean
src/hooks/useAutoSave.js	Created	Auto save draft to localStorage every 1 second
src/components/profile/ProfileHeader.jsx	Modified	Circle bug fixes — relative position, company color, remove extra text
src/components/profile/ProfileDetails.jsx	Modified	Skills display fix — extract .name from skill objects
src/components/profile/sections/SkillsSection.jsx	Modified	savedSkills state — reliable hasChanges detection
src/components/profile/sections/HeadlineSection.jsx	Created	Custom headline inline edit
src/components/profile/sections/OpenToWorkSection.jsx	Created	Open to Work toggle with badge
src/components/profile/sections/ResumeVisibilitySection.jsx	Created	Resume public/private toggle
src/components/profile/sections/CertificationsSection.jsx	Created	Certifications add/edit/delete with URL
src/components/profile/sections/LanguagesSection.jsx	Created	Languages with proficiency level
src/components/profile/sections/PortfolioSection.jsx	Created	Portfolio projects with tech tags
src/components/profile/sections/ProfileSlugSection.jsx	Created	Custom public URL with availability check
src/components/profile/sections/MultipleResumesSection.jsx	Created	Multiple resume upload/view/delete
src/components/profile/sections/RichTextAboutSection.jsx	Created	Rich text bio editor — no library
src/components/profile/sections/PrivacyControlsSection.jsx	Created	All privacy controls in one section
src/components/profile/sections/CoverBannerSection.jsx	Created	Company cover banner upload/remove

File	Created/Modified	Purpose
src/components/profile/sections/HiringStatusSection.jsx	Created	Company hiring status toggle
src/components/profile/sections/CompanyCultureSection.jsx	Created	Company culture text with char counter
src/components/profile/sections/EmployeeBenefitsSection.jsx	Created	Benefits tags with quick suggestions
src/components/profile/sections/CompanyTechStackSection.jsx	Created	Tech stack tags with popular suggestions
src/pages/PublicProfilePage.jsx	Created	Public profile — no login needed
src/pages/ProfilePage.jsx	Modified	All new sections added to candidate and company sections
src/hooks/useProfile.js	Modified	fetchProfile added to return statement
src/constants/api.js	Modified	UPLOAD_BANNER endpoint added

6. GitHub Commits Today

Commit Message	What Was Done
Fix: ProfileAvatar square button, company circle color, remove extra % text	Completion circle 3 bug fixes
Refactor: Config-driven profileCompletion, theme.js to role string	Professional architecture improvements
Feature: HeadlineSection, OpenToWork, ResumeVisibility, SkillsSection upgrade	4 new candidate sections
Feature: CertificationsSection, LanguagesSection, PortfolioSection	3 more candidate sections
Feature: useAutoSave hook, auto save drafts to localStorage	Auto save implemented
Feature: Public Profile URL — publicRoutes, ProfileSlugSection, PublicProfilePage	Public profile system complete
Feature: MultipleResumesSection — upload multiple resumes with labels	Multiple resumes feature
Feature: RichTextAboutSection — no library, browser execCommand	Rich text bio editor

Commit Message	What Was Done
Feature: PrivacyControlsSection — profile, photo, resume, contact visibility	Privacy controls complete
Feature: Company sections — CoverBanner, HiringStatus, Culture, Benefits, TechStack	5 company sections
Backend: Company extended fields — coverBanner, hiringStatus, companyCulture etc	Backend for company sections
Fix: ProfileDetails skills display, SkillsSection save button, India default removed	Bug fixes
Fix: Company fields added to allowedFields in userService	Company saving fixed
Fix: publicRoutes respects photoVisibility and contactVisibility	Public profile visibility

7. EOD Summary

Task	Status
Profile completion circle — 3 bugs fixed	Done
Config-driven completion logic	Done
Theme.js upgraded to role string	Done
Custom Headline section built	Done
Open to Work toggle built	Done
Resume Visibility toggle built	Done
Skills Section — tag UI with proficiency levels	Done
Certifications Section — add/edit/delete	Done
Languages Section — with proficiency	Done
Portfolio Projects Section	Done
useAutoSave hook — auto save drafts	Done
Public Profile URL — backend + frontend + public page	Done
Multiple Resumes Section	Done
Rich Text Bio — no external library	Done
Privacy Controls Section — all visibility toggles	Done
Company Cover Banner — upload/remove	Done
Company Hiring Status toggle	Done
Company Culture Section	Done
Employee Benefits — tag UI with suggestions	Done

Task	Status
Tech Stack — tag UI with popular technologies	Done
Backend: 5 company fields added to model + validators + service + controller + routes	Done
10 bugs found and fixed	Done
14 GitHub commits pushed	Done
EOD mail sent to Sandhiya	Done

8. Important Notes for Future Reference

- Config-driven completion — add new fields to config array, not to if/else chain
- `getTheme(role)` not `getTheme(boolean)` — always pass role string
- `execCommand` for rich text — no library needed, works in all browsers
- `savedSkills` pattern — track last saved state separately from profile prop
- Slug availability check must run before saving — prevent duplicate public URLs
- `lucide-react` has no brand icons — use `Link2`, `ExternalLink`, `Globe` instead
- `ErrorBoundary` is mandatory in production — never let app show blank white screen
- `allowedFields` whitelist in `userService` — every new field must be added here or it will be silently ignored
- Company RBAC on upload-banner — `authorizeRole(company)` blocks candidate and admin
- `$unset` removes field entirely from MongoDB — different from setting to empty string
- Auto save uses `localStorage` key based on section name — prevents cross-section conflicts
- React 19 incompatible with `react-quill` — use `execCommand` or upgrade `react-quill` with `-legacy-peer-deps`

9. Module 2 — Final Completion Status

Module 2: User Profile Management is 100% complete. All features implemented and tested.

Feature	Status
Profile photo upload	Done
Multiple resume upload	Done
Skills with proficiency level	Done
Education history add/edit/delete	Done
Work experience add/edit/delete	Done
Certifications add/edit/delete	Done

Feature	Status
Languages with proficiency	Done
Portfolio projects	Done
Custom headline (inline edit)	Done
Open to Work toggle	Done
Resume visibility toggle	Done
Rich text bio editor (no library)	Done
Auto save drafts	Done
Public profile URL with custom slug	Done
Privacy controls (profile, photo, resume, contact)	Done
Profile completion circle (SVG)	Done
Company cover banner	Done
Company hiring status toggle	Done
Company culture section	Done
Employee benefits section	Done
Company tech stack section	Done
Company details (name, website, industry, size, location)	Done
Public profile respects all visibility settings	Done

10. Next — Module 3: Job Posting

- Job model — title, description, company, requirements, salary, type, location
- POST /api/v1/jobs — company posts new job
- GET /api/v1/jobs — all candidates can browse jobs
- PUT /api/v1/jobs/:id — company edits own job
- DELETE /api/v1/jobs/:id — company deletes own job
- Job listing page frontend — card view with filters
- Job detail page
- Apply for job system

End of Day 11 Documentation | Smart Hiring Portal Internship | Mageswaran G
