

CLAUDE CODE · SKILLS · 2026

I tried 33 Claude Code skills. **These are the best.**

Tested & ranked. The 6 skills that make Claude Code plan, test, and review its own work — plus the exact command to install each one. You just steer. 🙌

6 skills

One command each

No expert needed

WHY SKILLS?

When Cowork isn't enough

Cowork keeps limits that make it safe for non-technical folks — but every now and then you want to do more than it allows. That's when you reach for Claude Code:

You don't need to be an expert — the right skills carry the hard part for you

The scary part is quality — catching bugs, testing, not shipping something that breaks

Skills do that part — Claude plans it, tests it, reviews its own work

You just steer. The skill handles the discipline.

SETUP

How to install a skill

 **Open Claude Code in your terminal**

 **Paste the skill's install command**

 **If it has its own marketplace, add it first**

 **Restart Claude Code to pick it up**

Most skills install in under a minute. Install the ones you use everywhere “globally.”

SKILL 01

Skill Creator

Most people who try to build a skill hit a wall — they don't know the structure or formatting, so they give up or build something brittle.

The official Anthropic skill — that builds other skills

Describe it in plain English — like explaining a task to a coworker

Claude drafts, tests & packages it — into something you reuse forever

INSTALL

```
/plugin install skill-creator@claude-plugins-official
```

The first one I'd install — every custom skill you make later comes out of this.

Senior AI/ML Engineer

SKILL 02

Grill Me

Claude loves to jump straight to a plan — you give a half-formed idea and it spits out a full document before it understands what you want.

From Matt Pocock — one of my favorite skills

It interviews you relentlessly — down every branch, before writing a line of code

16 questions in one session — 30–50 on bigger features

INSTALL

```
npx skills@latest add mattpocock/skills -s grill-me -g
```

Most mistakes come from Claude guessing. Grilling kills the guessing.

Senior AI/ML Engineer

SKILL 03

Superpowers

Claude sprints out of the gate, writes the whole thing in one shot, and it looks great — until you actually run it.

Plan the whole thing first — step back before writing

Work in an isolated environment — so nothing breaks your main project

Write tests before code — then review its own work twice

INSTALL

```
/plugin install superpowers@claude-plugins-official
```

Slowing Claude down just enough gets your first pass to 80%, not 60%.

Ashwini

Senior AI/ML Engineer

SKILL 04

Frontend Design

When Claude builds a site or a slide deck on its own, it often looks AI-generated — generic, a little off, the kind of thing you'd redo before showing anyone.

Websites

Slide decks

UI components

Landing pages

INSTALL

```
/plugin install frontend-design@claude-plugins-official
```

The official Anthropic skill for making what Claude builds actually look good.

Senior AI/ML Engineer

Context Mode

After ~30 minutes, most of Claude's memory is junk — it gets sluggish, forgets what file you were editing, and asks what you wanted (again).

Filters the junk — only the useful part of each command reaches memory

Keeps a running session log — files edited, tasks in progress, your last prompt

Picks up where you left off — even after Claude resets

INSTALL (ADD MARKETPLACE, THEN INSTALL)

```
/plugin marketplace add mksglu/context-mode · /plugin  
install context-mode@context-mode
```

Sessions that used to die at the 30-minute mark now run for hours.

Claude Mem

Claude Code starts every new session from scratch — so you re-explain the same project over and over, wasting time and thousands of tokens.

Captures what happened — file edits, decisions, bug fixes

Compresses it into summaries — stored locally on your machine

Pulls the relevant parts back — automatically, in every new session

INSTALL (ADD MARKETPLACE, THEN INSTALL)

```
/plugin marketplace add thedotmack/claude-mem · /plugin  
install claude-mem
```

It even writes and updates your project notes while you work.

BONUS • ALREADY BUILT IN

/review vs /ultra-review

/review

- ✓ Structured review of what you just built
- ✓ Hunts bugs, edge cases, design issues
- ✓ Fast and free — use it on everything

/ultra-review

- ✓ Sends work to the cloud
- ✓ A team of agents attacks each angle
- ✓ Save it for payments, databases, big changes

No install needed — most people just aren't using these.

ONE MORE THING

Don't install them all at once

That's the fastest way to get overwhelmed and use none of them.
Instead:

Pick one — start with Skill Creator

Learn it — build a few things with it

Then add the next — one skill at a time

You don't need to be an expert programmer — you need the right skills installed.

Ashwini

Senior AI/ML Engineer

Your turn.

Which skill are you installing first?

Tell me which one you'll try in the comments. Follow for more Claude Code workflows explained in plain English.
